Users:
- test : test
- netsec : password

Down here you can find 4 examples of attack vectors to complete the SQL Injection:
- a' or 'a'='a
- a' or '1'='1
- a' OR '1'<'2
- abc' || '3'>'2
- You can also create new ones...

Try all them out and check if your rule triggers all these examples.

NB: your rule should not trigger the normal login of both the users.
